NAME

rpg - run an rpg program

SYNOPSIS

rpg [options] <filename> [arguments]

DESCRIPTION

The "rpg" command is used to execute RPG programs from
the UNIX shell. On some systems the command name may
be "nrpg". Several options are available with this
command:

    +d - invoke dynamic debugger

    -d - do not invoke dynamic debugger (default)

    +t - turn on execution tracing

    -t - do not turn on execution tracing (default)

    +p - trace all "*switch", "*sccs", and "*xeq"
           commands.

    -p - do not trace paths (default)

    +w - print all warning messages (default)

    -w - do not print warning messages

BUGS

RPG was a bug.

                                              -002
